Charles Wagley

To the Tapirapé, grief and anger are closely related emotions and there is one word, *iwúterahú*, that describes either or both states of mind. Thus in both word and deed grief can be quickly transformed into vengeful anger.

In 1953, when I returned to the Araguaia River, I found only fifty persons, the remnants of the Tapirapé tribe, settled under the protection of the Brazilian Indian Service in a small village near the mouth of the Tapirapé River. My old companion, Valentim Gomes, was the Indian officer in charge. The history of the intervening years had been a tragic story; the Tapirapé had suffered steady depopulation from imported diseases and they had been attacked by the warlike and hostile Kayapo tribe, who had burned their village and carried off several younger women. They had been forced to leave their own territory to seek the protection of the Indian Service, and then cattle ranchers encroached upon the Tapirapé savannas, once rich with game. Champukwi was but one of the many victims of this disintegration of Tapirapé society. Upon my arrival several of Champukwi's surviving relatives met me with the traditional "welcome of tears"; to the Tapirapé, such a return mixes emotions of joy at seeing an old friend with the sadness of the memory of those who have died during the interim. Both the sadness and the joy are expressed almost ritually by crying. People spoke sympathetically to me of the loss of my friend and they brought a young man, who had been but a small boy in 1940, but who was now known as Champukwi. This boy had visited for many months, and had even studied a little, with the Dominican missionaries on the lower Araguaia River; he therefore spoke Portuguese well. He remembered my friendship with his namesake and perhaps felt, as I did, some strange bond between us. So again for a few days the name of Champukwi was entered into my notebook as my source of information on Tapirapé culture.

In the security of our studies and in the classroom, we claim that anthropology is a social science in which regularities of human behavior and of social systems are studied. But, at its source, in the midst of the people with whom the anthropologist lives and works, field research involves the practice of an art in which emotions, subjective attitudes and reactions, and undoubtedly subconscious motivations participate. Of course, the well-trained anthropologist takes all possible precautions to be objective and to maintain a detached attitude. He gathers information from a "cross section" of
